with cardiovascular disease permitted the observation
that these patients have a sensitivity to tobacco which
differs from that of normal persons.

DESCRIPTORS: *Housing, Structures, Construction,
Materials, *Concrete, Civil engineering, Germany.

The method of construction with precast concrete
shuttering slabs which can be used for any thickness
of wall of 25 cm or more, is applicable not only to
housing and industrial buildings but also for retaining
walls, bridge piers and other concrete structures.
The economy effected is due to the three main ad-
vantages of the method: the slabs form part of the
structure; timber or steel shuttering is unnecessary;
and practically all plastering is eliminated. (Author)
